C. Risk Management Function

1. Risk management in the bank includes risk identification, measurement and assessment, and its objective is to minimize negative effects that risks can have on the financial result and capital of a Bank. Risk management strategies include the transfer of risk, avoidance of risk, reduction of the negative effect of the risk and acceptance of the consequences of a particular risk. The design of a risk management system depends among other things, on its size, capital structure, complexity of functions, technical expertise, and quality of Management Information System (MIS) and is structured to address both banking as well as nonbanking risks to maximize shareholders' value.

The bank under the direction and oversight of the Board adopts the Risk Management Policy to ensure business strategies, profitability and financial stability are in consistent with the Bank's strategies and risk appetite. The Bank separately reviews the credit risk, operation risk and market risk to ensure that the Bank operate within the risk appetite expressed by the Risk Management Framework.

2. Risk Management Techniques

The Bank adopts the following techniques for these specific type of the risks:

i. Credit Risk

The Bank exercises the following techniques in assessing the credit risk:

- Strict adherence to Board approved policies.
- Independent review of credit proposals by Business Development Officers and Risk Management Department.
- Well-defined delegated authority levels.
- Effective observance to post disbursement credit risk management techniques.

ii. Operational Risk

The Bank has developed a framework for managing operational risk and evaluating the adequacy of capital covering the bank's appetite and tolerance for operational risk, as specified through the policies for managing this risk, including the extent and manner in which operational risk is transferred outside the bank. It also includes policies outlining the bank's approach to identifying, assessing, monitoring and controlling/mitigating the risk.

Disclosure Under Basel II As of Ashadh End 2081

iii. Liquidity Risk

The objective of liquidity management is to ensure that bank has sufficient funds to meet its contractual and regulatory financial obligations at all times. Basically the Bank adopts the following norms for liquidity risk management:

- Strict adherence to Basel II and NRB requirement to maintain the liquidity ratios above the regulatory minimum.
- Keeping the close eye on the baking and economic scenario.

iv Interest Rate Risk

The following norms are adopted by the bank to manage the interest rate risk:

- Effective cost benefit analysis for the product development.
- Regular Net Interest Margin and Credit to Deposit Ratio monitoring.
- Gap analysis to check the measures for the mismatches between rate sensitive liabilities and rate sensitive assets.

v. Capital Risk

The following norms are adopted by the bank to manage the capital risk:

- Meeting the regulatory capital requirements.
- Monthly computation of Capital Adequacy Ratios under normal and stress conditions.
